

ON LINE OPTICAL REFLECTOR

1625 to 1650nm

SC/APC

LC/APC

Features

- Low insertion loss
- High reflectance over the whole transmission wavelength range
- Easy to Install
- Good reliability and repeatability
- APC or PC is optional
- Pigtail or patch cord with integrated reflector

Product description

The online reflector for 1625nm&1650nm reflects all wavelength from 1610 to 1660nm, with wide bandwidth and low insertion loss, Optical reflector creates high reflectance at the termination of a passive optical network (PON) without disturbing traffic. They are suitable for both point to point(PTP) and Point to multipoint(PTMP) network

Application

- Public and private fiber optical Network.
- Termination of fiber optical lines
- Create high reflectance at the termination of a PON without disturbing traffic.
- Test reflectance at the central office
